

Axon:

Extending the core

To fully enable our clients to be as agile as possible, and to support niche solutions and customised operational approaches, we have built our standard Axon platform with an open pluggable architecture, extending its shelf life indefinitely, and ensuring it can seamlessly and effortlessly integrate the technologies of tomorrow into your production ecosystems of today.

#UnlockTomorrow
www.keylane.com

Many modern devices are designed to become redundant, allowing for newer iterations of the same-but-better device to be sold. A far cry from the technologies of yesteryear. We all know a relative who uses the same blender, radio, etc., that was purchased in previous decades.

With Axon's extended core functionality enabling full customisation and seamless integrations, we are likewise committed to delivering lasting solutions. Our extended core functionality ensures you will always keep pace with new technologies, empowering your business to reach its full potential.

What is a Standard Solution?

When we refer to our Axon platform as a standard solution, we mean that it is standardised to meet the broadest needs possible of insurance providers.

A customisable platform

Functionality, customisability and adaptability are core, in-built features of our Axon platform. This means we update it regularly and extend its functionality as per your needs, and the changing requirements of your policyholders and the industry at large.

You need not worry that our Axon platform will become obsolete, and we won't be calling you to sell you the same-but-better platform in a year

from now. Your Axon platform will always be the latest and greatest version, and with our extended core functionality, we can offer you limitless integrations to further enhance your products and services.

Prebuilt Plugins

We have prebuilt many plugins that can be used free of charge by our Axon clients. This greatly enhances your functionality, and allows you to deliver better, personalised customer experiences, products and services.

Build Your Own Plugins

Perhaps you would like to build your own plugin for Axon? No problem. Build that game-changer plugin and easily connect it to your Axon platform, and you are good to go. It's that simple.

Regular Updates Won't Break Your Plugins

Every month we provide you with a new version of Axon to ensure you are always working with the latest and greatest version, and for your peace of mind we will provide at least 12 months of backwards compatibility.

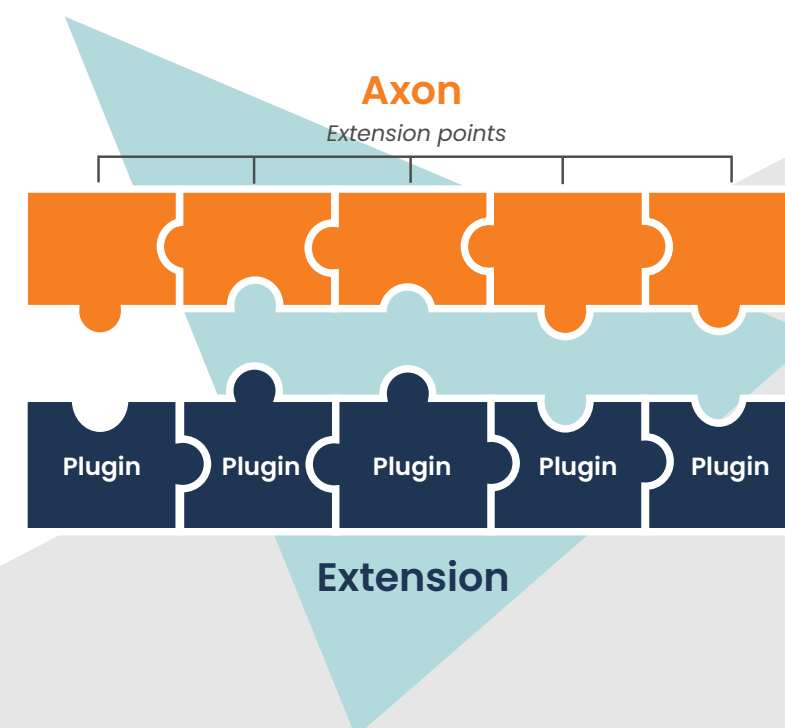

A deep knowledge of the Axon Core is not required to develop a plugin, and the release of plugins can be independent from general Axon releases.

How it works

Within your Axon core we have defined a series of extension points. These extension points allow for plugins to be developed which greatly expand upon the standard functionality of your Axon platform.

Plugins can be developed without a deep understanding of the inner workings of Axon, and can be released independently. This makes

defining new interfaces and implementations with third parties easier and faster to create. You can effortlessly add plugins to your Axon core. This could be a plugin that is already available, or one that you create yourself.

Plugin Functionality

Using our plugins, or your own plugins, can greatly extend the functionality of your core Axon platform. Below are a few examples:

Add data sources to your customer journeys

As you build customer journeys, key information is required to create accurate assessments. With our plugins, you can effortlessly obtain key risk information from external data sources, such as flood risks in your customer's specific location, which allows you to calculate more precise premiums.

Use interactive elements in your customer journeys

Intuitive technology is developing rapidly, such as interactive website elements that allow customers to click on images to identify where damage has occurred. By means of configuration, you can embed these interactive website elements within the customer journey of Axon.

Easily identify local repair shops

Using a plugin that connects to Google Maps during your customer journeys enables you to identify the location of the nearest repair shop, allowing you to offer better, more personalised customer services and products.

Bulk imports and exports

Modern applications have real-time connections, but in some cases batch imports and exports are required. With plugins, you can make use of import and export functionality to handle your data transformation needs.

Proactive fraud checks

When underwriting or assessing claims, effortlessly connect to any desired fraud system for an unrivalled situational overview. Axon has multiple extension points, so there is no limit. And once the fraud checks are complete, Axon will continue the assessment and advise on the next steps.

Talk to your other systems

Perhaps you want to use an external document generation system? With a plugin, you can ensure applications have their own standard interfacing, and let the plugin take care of data transformation. Furthermore, you can inform your CRM-system about events taking place in Axon.

Work smarter with Axon core extensions

At Keylane, we believe technology should empower our clients to be the best versions of themselves. We develop solutions not just for today, but for tomorrow. Solutions that are designed, built and nurtured by the very best IT specialists, developers and creative minds. Together, we share a thirst for innovative solutions, and a hunger for client success stories. Stories we help you grow, but that belong to you. Our approach is very much an outside-in approach. We start by looking at the challenges from our clients' perspectives, then we develop solutions to address them.
